

Esri Publishes Introduction to Human Geography Using ArcGIS Online

[Esri](#), a location intelligence company, has announced the publication of [Introduction to Human Geography Using ArcGIS Online](#). The book is written by Professor J. Chris Carter, who has been teaching human geography and GIS for more than 15 years.

Pushing readers to better understand the human society and its impact on our planet, this college-level textbook challenges students to ponder the *why* of *where* with questions such as: How do physical features contribute to unique places and regions? What can local obesity rates tell us about food access? Why do people live where they do? How might we anticipate – and mitigate – conflict? What data are we missing? Are there patterns, and if there are, where?

Introduction to Human Geography Using ArcGIS Online includes exercises in employing Esri's [ArcGIS Online](#) software application to explore the essential themes of human geography, including population and migration, economic activity, language and religion, and humans' impact on the environment. Most maps in the book include links that enable instructors and students to explore the data and see how it applies to where they live. ArcGIS Online exercises enable students to run spatial analysis on data from the United Nations, World Bank, US Census Bureau, the Environmental Protection Agency (EPA), and other organizations. Creative instructors can even customize the exercises.

Introduction to Human Geography Using ArcGIS Online is available in print (ISBN: 9781589485181, 440 pages, US\$74.99) and as an e-book (ISBN: 9781589485198, US\$74.99).
