

EuroGeographics Releases New Version of EuroGlobalMap

Forty five members of the Association for the European National Mapping, Cadastral and Land Registry Authorities have contributed to a new version of EuroGlobalMap, which now includes fields for the Trans-European Transport Network (TEN-T) within the updated transport theme, specifically links for railways (RailrdL) and road networks (RoadL). The latest release also includes updated information for the 1:1 million dataset's administrative and settlement themes. It is available at www.eurogeographics.org/form/topographic-data-eurogeographics.

Angela Baker, Sales, Marketing and Channel Manager, EuroGeographics said: "As a result of these latest updates, three themes have been generalised from our more detailed products, 1:100 000 EuroBoundaryMap and 1: 250

000 EuroRegionalMap, giving even greater confidence that the information provided is consistent, comparable and easily shared - regardless of its national source. We have also updated the metadata and checked its compliance with INSPIRE metadata regulations."

The 2018 release of EuroGlobalMap covers 45 countries and territories, and comprises six themes: Administrative boundaries, names locations, transport networks, settlements, elevation; and the water network. It is available free of charge under an open data licence from www.eurogeographics.org and enables a wide range of applications, including mobile mapping, demographic and socio-economic analysis, hydrology, energy and environment modelling and in education and research. It is also ideal for cartographic visualisation across Europe.

Since its launch in 2013, more than 6,500 users have downloaded EuroGlobalMap.
