

# LizardTech GeoExpress v5.0

LizardTech (WA, USA) has released GeoExpress version 5.0, with MrSID image processing software. The new version includes image re-projection from one to another coordinate reference system. "Area of interest"™ encoding is also available, allowing specification of different compression ratios within one image or mosaic. GeoExpress JPEG 2000 encoding offers pre-defined image profiles (NPJE, EPJE) that ensure compliance with US Department of Defense image standards. Enhanced mosaic features enable any combination of supported input images into one seamless mosaic. The product is available in three versions: Unlimited Standalone, Bundled, and Lite.
