

Maptitude Mapping Software 2018 Country Package Released

Caliper has announced the release of the [2018 DACH Country Package](#) for its Maptitude mapping software. Maptitude Country Packages bring the power and flexibility of the Maptitude product suite to a global audience and enable customers to make geolocation-based decisions.

The [2018 DACH Country Package](#) includes 4th quarter 2017 map content for [Germany](#), [Austria](#), [Switzerland](#), and Liechtenstein. Updated map layers, such as refreshed streets and landmarks are provided for each country, as well as updated travel times and improved address matching.

For detailed information on each Country Package, including those for countries not mentioned, visit the [Maptitude Included Data page](#). Maptitude ships with one Country Package of your choice and additional Packages can be purchased separately for US\$595.

You can seamlessly switch between the countries purchased. Doing so refreshes the Maptitude interface with country-specific tools such as those for [territory and sales mapping](#), finding, [pin mapping](#) ([geocoding](#)), [routing](#), displaying [demographics](#) (where available), and Create-a-Map Wizard.

If you have any questions, send an e-mail to sales@caliper.com.
