Orbit GT Releases Free SDK and API

Orbit GT is releasing a free SDK and API for its 3D Mapping Cloud SaaS (Software as a Service).

These new programming tools will enable users to integrate 3D Mapping Cloud data and functionality into their workflows. The SDK supports all content on the 3D Mapping platform, no matter the collection method. Orbit GT promises an "equal user experience" in applications that use the SDK.

"What is GIS or Mapping if you can't integrate it in your workflow? In Orbit GT's vision, integration is key," said Peter Bonne, CEO of Orbit GT. "This SDK includes all capabilities of the 3D Mapping Cloud Viewer being free to use, and can be embedded in any web-based or desktop-based application and workflow."
