

senseFly eBee X Combines with Agisoft Metashape

senseFly, the global leader in fixed-wing drones, has announced a limited-time offer which combines the senseFly eBee X (and its highly precise suite of cameras) with intelligent photogrammetry software from Agisoft Metashape.

Until 30 September 2019, customers who purchase an eBee X with one of the following sensors (senseFly S.O.D.A. 3D, senseFly Aeria X or MicaSense RedEdge-MX) will receive 1,000 (USD/CHF/EUR) off the price of the drone and a six-month Agisoft Metashape Professional license for free (offer ends 30 September 2019, or while supplies last, whichever comes first).

Combined, this solution provides users with fully integrated and highly precise suite of cameras as well as powerful software that enables the generation of high-quality point clouds, orthomosaics and digital elevation models - all while reducing operation time and costs for end-users.

“senseFly is at the centre of the growing fixed-wing drone market, and we continue to lead the way by building technological and commercial partnerships with the most important players,” said senseFly CEO Gilles Labossière. “With this new offer, customers get access to our leading fixed-wing drone technology and Agisoft’s intelligent photogrammetry software in one convenient package.”

“We’re very excited to be a part of this special offer,” said Dmitry Semyonov, Agisoft CEO. “Whether you need it for photogrammetric processing of digital images or to generate 3D spatial data, Agisoft Metashape is fast and flexible software designed to produce quality and accurate results.”

The senseFly eBee X with Agisoft Metashape software is available for purchase now via [senseFly distribution partners](#).
