

Topcon Announces MAGNET Enterprise with Autodesk BIM 360 Integration

Topcon Positioning Group has announced the MAGNET Enterprise software system has been updated to expand integration with Autodesk solutions through a new Autodesk BIM 360 cloud connection.

The integration with BIM 360 is designed to allow [MAGNET Enterprise](#) operators to manage 2D plans, 3D models, and any other project documents in the BIM 360 or Autodesk A360 Drive environments. The software is designed to streamline document management bi-directionally between the field and office and provide a dedicated location for sharing and saving the most updated project files.

“The BIM 360 integration allows construction teams to perform field layout from building plans stored in the Autodesk cloud or collect survey and positioning data that can be directly uploaded to BIM 360,” said David Ahl, director of software product management. “Additionally, machine automation users can access Autodesk documents through Enterprise and Sitelink3D.”
