# YellowScan Releases Point Cloud Data Software CloudStation

Workflow CloudStation

YellowScan, the UAV Lidar Solutions provider, has announced the release of CloudStation, its new software providing a complete solution to create and manipulate point cloud data. It allows the user to extract, process and display data immediately after flight acquisition. The auto-generation of flight lines and the production of LAS files are now done in a few clicks.

"This launch is an exciting move for YellowScan, it allows a better and simplified experience for the customers." says Tristan Allouis, Chief Technical Officer of YellowScan. "Better user experience leads to more efficiency for our demanding client's projects."

Key benefits include:

- Checking the integrity of data in the field
- Verifying area coverage
- Making sure all objects mapped are identified
- Extracting LAS files with only a few clicks, within a few minutes

CloudStation is available with the acquisition of a YellowScan Lidar solution. For more information, visit www.yellowscan-lidar.com.
